Agile

1. **Complete User Stories**

   a. As a vanilla git power-user that has never seen GiggleGit before, I want to know the difference between GiggleGit and vanilla git, so that I can know if it is convenient for my workflow

   b. As a team lead onboarding an experienced GiggleGit user, I want to ensure that they can easily share their knowledge about GiggleGit's features so that everyone can use GiggleGit's capabilities to the fullest.

2. **Create a third user story, one task for this user story, and two associated tickets.**

   a. As a product manager, I want to be able to create a meme playlist specifically for the likes of my team, so that merges align more with my team's sense of humor.

      ● Task: Creating meme playlists
         1. Ticket 1:
            a. Title: Add the ability for users to upload memes of their liking.
            b. Details: Implement a feature that allows the owner of a repository, the project manager, to add memes to a custom playlist. This playlist will be used during merge events, allowing team-specific memes to play when conflicts are resolved or merges are completed.
         2. Ticket 2:
            a. Title: Create a video tutorial on meme playlists
            b. Details: Create a video tutorial showcasing how the owner of the repository, can add a meme playlist. The tutorial should walk through the steps of selecting memes, adding them to a playlist, and associating the playlist with the repository's merge events.

3. **This is not a user story. Why not? What is it?**
   a. As a user I want to be able to authenticate on a new machine
      - It is not a user story because it doesn't tell why this feature is necessary.
      - It doesn't go into the specifics.
